

# Brighten up all living spaces

*colourliving continues to provide the most innovative lifestyle solutions to Hong Kong homes, the latest one is the skylight technology by CoeLux.*

New to the collection and seen for the first time, CoeLux features state-of-the-art technology that recreates an optical phenomenon of natural light indoors.

Exclusively brought to Hong Kong by colourliving as the authorised CoeLux dealer, CoeLux is the first technology created to foster a pioneering solution for lighting.

Reproducing the true effect of natural sunlight and an infinite blue sky, through the use of LEDs and nanotechnology, it creates a sensation of infinite space. The skylight also recreates Rayleigh scattering, the process that separates light particles into the 'blue' sky and 'yellow' sun.

Striving to sync with natural patterns of daylight, CoeLux provides the right amount of 'sunlight' to uplift people's moods, which is beneficial to emotional health. Delivering endless sunny days, the skylight poses no risk from ultraviolet rays, and is the perfect addition to windowless spaces and polluted cities.

Not only is CoeLux the best option for home basements and office spaces that are deprived of natural sunlight, it is also a solution to improve the quality of treatment for patients in hospitals and wellness centres, helping them feel calm, focused and productive.

Available in different latitudes, the CoeLux range mimics sunlight from the Tropics, Mediterranean and northern Europe. The CoeLux 60 produces cooler vertical rays as seen in tropical regions, whereas the CoeLux 45 skylight features a Mediterranean ceiling beam that offers an equal balance of light and shade.

At colourliving, you can find the CoeLux ST and CoeLux 45 LC models. As the second generation of the artificial light, CoeLux ST is much smaller in size, and a variety of louvre patterns is available for selection. It allows users to adjust the lighting by dimming its brightness. Meanwhile, CoeLux 45 LC is an ideal option for Hong Kong homes, as it can be installed in lower ceiling spaces. **colourliving** | 333 Lockhart Road, Wan Chai | 2295 6263 | [www.colourliving.com](http://www.colourliving.com)
